SCOTT DIEMER

IT SUPPORT | SYSTEMS & NETWORK TROUBLESHOOTING | LINUX & WINDOWS

St. Cloud, FL | 407-325-5553 | scott@scottdiemer.com | scottdiemer.com | github.com/scottdiemer | linkedin.com/in/scott-diemer-6b76241b8

PROFESSIONAL SUMMARY

IT support career-transition professional with extensive customer service and operations leadership plus hands-on experience in Linux and Windows administration, networking, identity management, and self-hosted infrastructure. Longtime Linux daily user (Manjaro) who administers Ubuntu-based web, email, and ticketing services; builds Active Directory labs; and serves as the go-to technical resource in a family retail business. Currently completing the Google IT Support Professional Certificate and targeting IT Support / Help Desk roles.

TECHNICAL SKILLS

Operating Systems: Manjaro Linux, Ubuntu Server 24.04 LTS, Windows 11 Enterprise, Windows Server 2022

IT Support & Administration: Hardware/software troubleshooting, end-user support, Active Directory, users/groups/OUs, Group Policy, AppLocker, PowerShell, system recovery

Networking & Security: TCP/IP, IPv4, subnetting/CIDR, DNS, DHCP, NAT, routing, SSH, TLS/SSL, UFW, Fail2ban, SPF, DKIM, DMARC, PTR/rDNS

Infrastructure & Tools: QEMU/KVM, Docker, Nginx, osTicket, Mailcow, Postfix, Dovecot, Rspamd, MariaDB, PHP-FPM, Git/GitHub, Bash, systemd

CERTIFICATIONS & EDUCATION

Google IT Support Professional Certificate - Grow with Google / Coursera | In Progress

- Completed: Technical Support Fundamentals
- Current coursework: The Bits and Bytes of Computer Networking

Computer Science - Winter Park Tech (Orange Technical College)

- Coursework in programming, software fundamentals, database concepts, and object-oriented programming.

PROFESSIONAL EXPERIENCE

Manager | Farm City Inc. | Orlando, FL | Present

- Progressed from part-time work in the family-owned retail business to current management responsibilities, with a focus on customer service, staff support, vendor coordination, scheduling, cash handling, and problem resolution.
- Serve as the go-to internal resource for technical issues, troubleshooting hardware, software, connectivity, and business-system problems as they arise.
- Built and deployed the company website from the ground up and continue to manage domain/DNS configuration, deployment, maintenance, and troubleshooting.
- Train and support staff on business systems and workflows, translating technical issues into clear, practical guidance.

Trusted Editor Group Member (Volunteer) | GNOME Project / GNOME Foundation | Remote | Mar 2022 - Oct 2024

- Volunteer member of the GNOME Project Trusted Editor Group with permission to edit and maintain content on the GNOME Wiki.
- Updated community documentation and maintained wiki content as needed; listed on the archived Trusted Editor Group member page.

SELECTED TECHNICAL PROJECTS

Self-Hosted Linux Infrastructure & Service Recovery | Ubuntu 24.04, Docker, Nginx, MariaDB, PHP-FPM, Mailcow, osTicket | scottdiemer.com/journal

- Administer an Ubuntu VPS hosting Mailcow email and osTicket support services; manage Docker stacks, Nginx, TLS certificates, database services, firewall rules, and ongoing maintenance.
- Upgraded the server from Ubuntu 22.04 to 24.04 LTS after creating tarball and MySQL backups; restored Mailcow and osTicket, resolved PHP compatibility issues, and updated UFW/Fail2ban rules.
- Configured mail authentication and deliverability controls including SPF, DKIM, DMARC at reject policy, and PTR/rDNS; verified legitimate mailbox and ticketing-system mail flow.

Active Directory & Endpoint Security Lab | Windows Server 2022, Windows 11 Enterprise, QEMU/KVM, AppLocker

- Built a virtual enterprise-style lab with a Windows Server 2022 domain controller and domain-joined Windows 11 Enterprise workstation.
- Configured static networking and DNS, structured Organizational Units, user accounts, security groups, domain joins, and least-privilege access.
- Created AppLocker policies to restrict unauthorized user-space application installs and practiced troubleshooting Group Policy and endpoint behavior.

DMARC Reporting Automation & Mail Security | Manjaro Linux, parsedmarc, GNOME Keyring, systemd

- Automated daily DMARC aggregate-report processing using parsedmarc and systemd user timers on a Manjaro Linux workstation.
- Used GNOME Keyring and secret-tool for credential handling, then reviewed aggregate results to validate authentication alignment and identify spoofing attempts.

Web Infrastructure & Deployment | Next.js, Nginx, SSH, Git, Bash | scottdiemer.com

- Built and deployed a Markdown-driven technical portfolio to a self-managed Linux server, configuring Nginx, SSH access, Git authentication, permissions, and repeatable deployment workflows.
